

字符串热路径：逐元素复制 vs 8 路批量搬移

 f 热点来源：DoReplace / DoConcat / AllocFromUtf16

原始标量路径

逐元素复制 / 替换

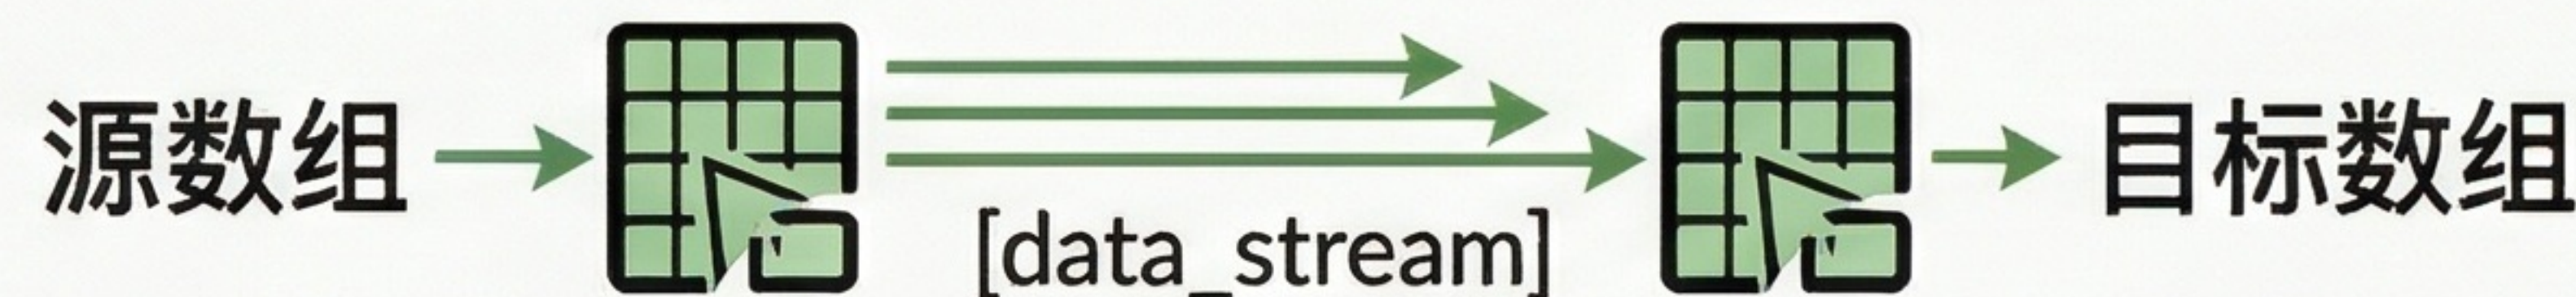

```
for(i=0; i<N; i++){  
    ...  
}
```

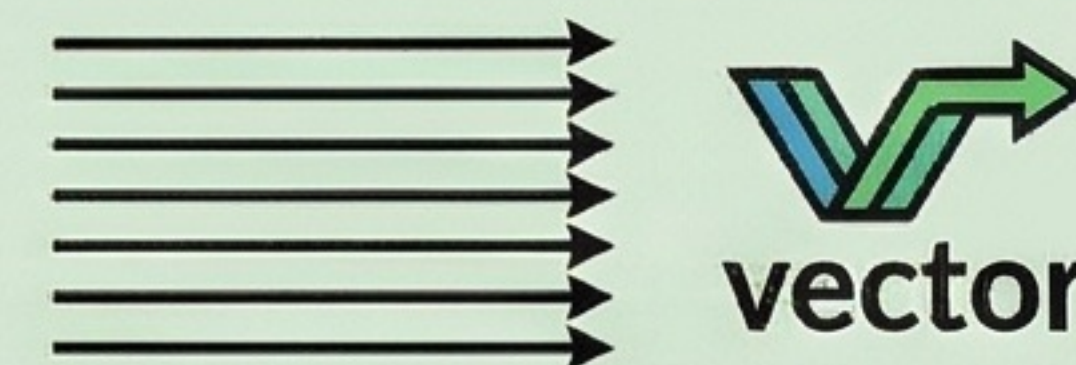

每轮都要索引更新与分支判断

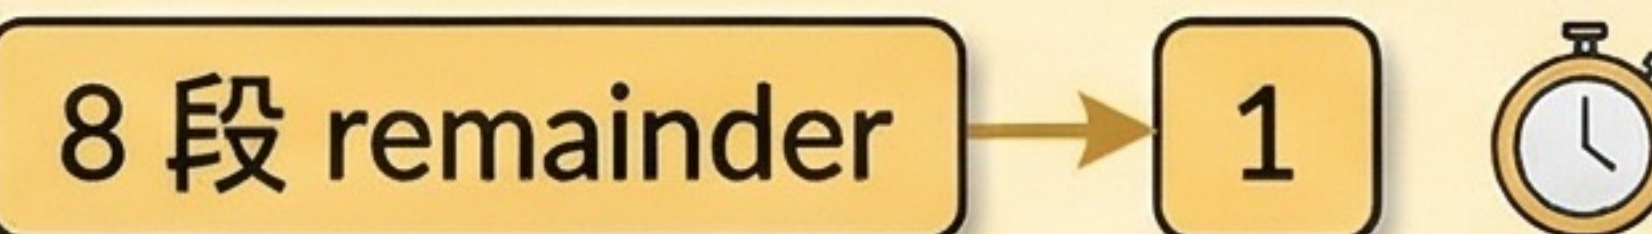

批量搬移路径

8 路 helper 批量搬移

尾段 remainder 路径

语义保持不变；优化点仅在于压缩循环框架开销
